

EXPERT SOLUTIONS TO BAY CLASS VESSELS

SUBJECT MATTER EXPERTS

Working with A&P Group in Falmouth, members of the NDT team have a proven track record in delivering exhaust system conditional inspections, repairs, and modifications onboard RFA Mounts Bay.

NDT continues to respond rapidly when issues are identified on-board and have carried out repairs including a recent exhaust bellow replacement for RFA Mounts Bay.

This ensures the team can deploy and support the Royal Navy at sea and thus maintaining its full operational capability away from home ports.

NDT is also proud to be CONDO trained (Contractor on Deployed Operations) which is required for all contractors working away in support of MoD operations.

DIGITAL DASHBOARD

NDT has developed a bespoke digital dashboard to deliver its projects. This is a live information delivery allowing clients to track the progress - daily if they wish - of their projects in real time throughout the project period.

The platform has the functionality to enable NDT to customise their clients dashboard to their specific access requirements. The digital dashboard simply informs the client at every stage - from design to in-service maintenance - of their projects and assets.
